

*Cover Photo:
At courses where premium quality
conditions are demanded, rolling
and/or double cutting are now being
conducted on a routine basis with
bermudagrass greens.*

With only a few years of experience with the ultradwarfs, refining management practices such as verticutting is still underway. See page 1.

Unless manually removed, it is probable that this tree will fall and damage the irrigation controllers below. See page 13.

USGA® GREEN SECTION Record

1

Going for the Gold with Bermudagrass Greens: Part II

While the basics remain the same, tools have become available to help “fine-tune” the conditioning of bermudagrass putting surfaces.

By John H. Foy

6

Black Box Research

Seeking answers to the effectiveness of bacterial inoculents.

By Monica L. Elliott, Ph.D.

10

Temporary Sanity

A year-round approach to maintain your aprons as they need to be — firm and dry!

By Larry Gilhuly

13

Trees vs. Turf

Manage the trees on the golf course to provide healthier turf.

By Jack Swayze

15

Leaching for Salinity Management on Turfgrass Sites

Where salts are a problem, leaching is the answer.

By R. N. Carrow, M. Huck, and R. R. Duncan

25

Generating Results

The Audubon Cooperative Sanctuary Program for Golf Courses is helping superintendents to become stewards of the environment.

By Jean Mackay
